## INTRODUCTION

Welcome to our latest full-line catalogue, in which we're excited to unveil our newly refreshed branding! Moving forward, we'll be known simply as COBA. A change that comes following the demerger from COBA Plastics Group and is aimed to support continued growth for our clients and stakeholders. Rest assured, whilst our name may have evolved, our commitment to providing high-end products and unparalleled support remains.

Ever since pioneering safety matting in the UK in 1979, COBA has led the industry with innovative products and unmatched expertise. The inception of COBAmat® offered a ground-breaking alternative to wooden duck-boarding at the time, and many more innovations have occurred since, including the introduction of Orthomat® in 1993, and Social Distancing Mats in 2020 – all with the aim of improving safety and comfort for those that stand at work.

The remarkable growth of our business has demanded expansion, and we now operate from five permanent facilities spanning the UK, Germany, Slovakia and South Africa. Supported also by sales representatives in France, Poland, Spain, Portugal and Italy. With a combined storage space of 44,000 ft, we are poised to best serve our customers, and continue our legacy of excellence in workplace safety.

And speaking of customers, COBA continues to lead the way in providing extensive backing through product training and marketing support. Our dedicated team of experts conduct joint site visits, offering specialised knowledge to the unique requirements of each end user. Also, our PIM system launched in 2021, makes accessing product information a breeze.

**Right Mat, First Time** is our motto, and reflects our enthusiasm for effective product selection, driving customer satisfaction and reducing wastage. From our years of experience, it pays to get this stage right, especially with so many unique products to choose from. Right Mat, First Time is also our commitment to offer the most suitable product for your workplace, not the most expensive.

All those years of experience have also been incorporated into a mobile app, **Mats in Mind™**. Available for free on both the App Store and Google Play, it does the decision-making for you. By answering a few simple questions, we can narrow down the options to the extent that a choice can be made.

Our vision is to enhance the experience of everyone who traverses our exceptional products. Aiming for new and novel manufactured solutions with a better and more sustainable future in mind. The environmental issues we face in this world are concerning, which is why we regularly reassess our products and processes. So far this includes offsetting carbon emissions, adopting recyclable packaging, and partnering with Sedex for ethical sourcing (in the UK) to name just a few. In fact, one of our most recent additions is the ReGen range of mats made from 100% regenerated material.

# PRODUCT TESTS & STANDARDS EXPLAINED

In partnership with the internationally recognised SATRA, we test our products to the latest standards in slip and fire safety, and ESD ratings.

## FIRE RESISTANCE

### BS EN 13501-1

Reaction to fire classification.

The classification is split into three parts:

The main part of the classification is its letter – A1, A2, B, C, D, E and F. A1 (Non-combustible) is the highest level of performance.

There is a smoke classification of s1, s2 or s3. s1 is the highest level of performance.

There is a classification of flaming droplets of d0, d1 or d2. d0 is the highest level of performance.

## FLOOR COVERINGS

### BS EN 14041

This standard relates to internal floor coverings that meet certain fire, slip-resistance, or electrical behaviour.

## ELECTRICAL SAFETY MATTING

### BS EN 61111

Electrical safe matting that conforms to this standard is available in different classes (0-4) and consists of a fine, fluted pattern on one side and a cloth impression on the reverse. Find out more about the testing process on page 54

### BS 921

This standard was made obsolete in 2013 and is superseded by BS EN 61111.

### DIN EN 6134

This standard sets out how electrical installations should be tested initially and at intervals and includes the requirement to check the resistance of the flooring system. The standard describes the test method for flooring which is performed using a tripod electrode according to EN 1081.

## SLIP RESISTANCE

Internationally recognised British standard that uses a pendulum device to measure a surface material's slip potential.

Slip Potential	PTV
High slip potential	0 – 24
Moderate slip potential	25 – 35
Low slip potential	36+

### RAMP SLIP TEST: DIN 51130:2014

Internationally recognised German standard that measures slip potential by the angle at which the surface material loses friction.

R Value	Category Static Friction is	Angle of Inclination
R9	Low	6° to 10°
R10	Normal	>10° to 19°
R11	Above Average	>19° to 27°

## **ESD Mats & Accessories**

Protecting people and components  
from the effects of static electricity

Electrostatic Discharge (ESD) can be a problem in certain working environments and pose a major risk to electrical or explosive components. Floors, chairs, work surfaces and packaging can all create static electricity, which when released is known as Electrostatic Discharge. We have a comprehensive range of lab tested ESD floor mats and accessories to protect you and your electronic components against the harmful effects of static electricity.

## A GUIDE TO ESD PROTECTION

Electrostatic Discharge (ESD) can cause serious issues in automotive manufacturing, potentially damaging electrical components, or detonating airbags. Floors, clothing, and packaging can all create static electricity, which when released becomes known as Electrostatic Discharge. We have a comprehensive range of industry tested ESD floor mats and accessories to protect your valuable components against the harmful effects of static electricity.

### ESD EXPLAINED

Electrostatic Discharge (or ESD) is the sudden release of electricity between two electrically charged objects, commonly referred to as static electricity.

An effective solution is static-dissipative floor or work bench matting (ESD matting) which has conductive properties to draw the electric current away from the component.

For ultimate protection, they are used in conjunction with specialist ESD accessories such as heel grounders, wristbands and cords.

### ESD FLOOR MAT SAFETY

Choose the appropriate floor mat(1) for your workbench in line with resistance requirements. Electrical resistance is measured in ohms or shown as this symbol  $\Omega$ .

Operatives are advised to use two heel grounders(2), featuring a grounding tab to be used in the shoe, under the foot. Having chosen

Resistance $\Omega$	Type	Function
$10^3$ to $10^5$	Conductive	No initial charge. Provides path for charge to bleed off.
$10^5$ to $10^9$	Dissipative	No or low initial charge. Prevents discharge to or from human contact.
$10^9$ to $10^{12}$	Anti-Static	Initial charges are suppressed.
$> 10^{13}$	Insulative	Insulators and base polymers. Not ESD.

the appropriate floor mat, ensure you have a compatible floor mat grounding wire(3) to connect the earth bonding plug(4) to the mat.

### ESD WORKBENCH SAFETY

Choose the appropriate mat for your workbench(5) in line with resistance requirements. ESD wristbands(6) are recommended to ground the operator when working with electronic components.

The fabric bands feature silver monofilaments for conductivity. They are designed to be fitted to a coiled grounding cord(7) and used in conjunction with a compliant earth bonding plug(8). A common point grounding wire connects the plug to the mat.

**IT IS CRITICAL NOT TO CONFUSE STATIC-DISSIPATIVE (ESD) MATTING WITH 'ANTI-STATIC' OR 'ELECTRICAL SWITCHBOARD MATTING'.**

## ZONES

We recommend a zoning system when choosing your entrance matting. Whether your entrance extends outdoors or is fully covered, creating three zones delivers optimum dirt barrier performance, ensuring interior floors are kept clean and hazard free.

									
Light	Medium	High	Very High	Light	Medium	Heavy Duty	Max Duty	Dirt	Moisture
Less than 80 people per hour 3-4 metres	Up to 300 people per hour 6-7 metres	Around 600 people per hour 8-10 metres	Over 5,000 people per day 9-12 metres	Suitcases, Wheelchairs	Supermarket Trolleys, Sack barrows, Luggage trolleys	Supermarket Cages, Pallet Trucks	Forklift Trucks, Hydraulic Cranes	Most Effective Against Dirt/Soil	Most Effective Against Moisture
Pedestrian Traffic				Wheeled Traffic			Contaminants		
It is important that matting is a sufficient length to allow moisture and debris to be wiped off footwear as people walk across the mat. Our COBA Flooring team recommends a minimum of six footsteps for this to be effective.				Depending on the nature of the building, the entrance may have to contend with different types of wheeled traffic. It is important that all matting complies with DDA Regulations/The Equality Act, so that wheelchairs can safely move on and off.			All of our products protect you against contaminants, but some products are more effective than others for removing either dirt or moisture. Use these icons to determine which.

## Strip Curtains

Keeping the outdoors outside  
and the heat inside

A range of PVC strips and fittings to create bespoke curtains for any commercial environment. Strip Curtains are used as internal and external thermal partitions, but can also act as a barrier to fumes, dust, flying insects, birds etc. They can be used to reduce noise levels between production areas and quiet areas, i.e., Quality Control in factories. Made from a high quality, low toxic, cadmium-free material they have extremely good clarity as well as consistency of colour and dimensional tolerances. 'Buffer' type strips are available for extreme conditions where 'Standard' material may have a more limited lifespan.

### FLEXIBILITY - 3 WAYS TO ORDER

- **Complete kits** - Made to measure, priced per m<sup>2</sup>.
- **Rolls** - Full 50m rolls of PVC strips.
- **Strips** - Replacement strips priced per linear metre complete with a fitted hanger.

### EASE OF INSTALLATION

Complete door kits are easy to fit and come with fitting instructions. When you order strips by the metre hangers are included. You don't have the hassle of attaching them yourself, making repairs both straight forward and cost-effective.

### COST SAVINGS

True ability to order individual replacement strips with fitted hangers means reduced maintenance costs and a reduced risk of damage during fitting. Order a full door kit specified to your requirements to reduce wastage.

Being water and air tight makes PVC one of the best thermal insulators. Also, due to PVC's low thermal conductivity, strip curtains can help save energy.

Ultra violet light can break down polymer chemical bonds, degrading transparency and performance. Our PVC strip curtains contain UV stabilisers to inhibit polymer degradation by absorbing and dissipating harmful radiators.

Loud working environments can lead to tiredness and the risk of misunderstandings in communication. PVC strip curtains can be used as a sound absorber and noise insulator to protect workers from too much noise.
